

DIGITAL LITERACY PROJECT REPORT

Name: ARYA SONI

Registration Number: 25BCE11033

Branch: CSE Core

Year: First Year

Course Code: CSE0001

Course Title: Digital Literacy

INTRODUCTION

This project was given as part of the Digital Literacy course to help students understand how to use digital tools effectively and responsibly. As a Student Digital Ambassador, the goal was to explore different aspects of the digital world, including online communication, professional presence, cyber safety, and useful platforms for learning and collaboration.

Through this project, I worked on five different tasks, each focusing on a specific area of digital literacy. These tasks helped me gain practical experience in creating content, using platforms like GitHub and Google Forms, and understanding online safety.

Overall, this project helped me become more confident in using digital tools and more aware of the risks and responsibilities involved in the online environment.

TASK 1: INFOGRAPHIC

For this task, I created a digital literacy awareness infographic using Canva. The infographic included key topics such as the meaning of digital literacy, safe internet practices, useful tools for students, and email etiquette. I tried to keep the design simple and visually appealing by using icons, short points, and proper colour combinations.

While making the infographic, I learned how important it is to present information in a clear and engaging way. Instead of writing long paragraphs, I focused on using short and meaningful points that can be easily understood by students. One thing I found slightly difficult was selecting the right layout and design elements, as there were many options available in Canva.

Overall, this task helped me understand how to communicate information visually and made me realize that design plays an important role in spreading awareness effectively.

TASK 2: DIGITAL PORTFOLIO

In this task, I created and updated my profiles on platforms like GitHub, LinkedIn, and Kaggle.

On GitHub, I created a profile README that includes my basic details such as name, branch, and learning goals.

On LinkedIn, I added my education details and started building a professional profile.

Each of these platforms serves a different purpose. GitHub is useful for showcasing projects and coding work, LinkedIn helps in building a professional network, and Kaggle is useful for learning data science and practicing problems. Before this task, I was not very familiar with Kaggle and GitHub and how useful it is for students.

Over the next four years, I plan to regularly update my profiles, upload projects, and improve my skills. This task made me realize that having a digital presence is important for future opportunities like internships and jobs.

TASK 3: PLATFORMS

For this task, I explored both coding and collaboration platforms. I created an account on Hacker Rank and completed a beginner-level problem, which helped me understand how coding platforms work. It was a simple problem, but it gave me confidence to try more challenges in the future.

For the collaboration part, I created a Google Form with five questions related to digital literacy. The form included both multiple-choice and short-answer questions. I also checked the response sheet linked to the form, which helped me understand how data can be collected and analysed easily.

This task showed me how useful these tools are for academic purposes. Coding platforms help in improving problem-solving skills, while tools like Google Forms can be used for surveys, quizzes, and feedback collection. I found this task interesting because it involved practical work that can be used in real situations.

TASK 4: EMAIL ETIQUETTE

In this task, I wrote two professional emails — one requesting an assignment extension and another applying for an internship. While writing these emails, I learned the importance of proper structure, polite language, and clarity. A good email should have a clear subject line, a respectful greeting, and a concise message.

I also created a social media do's and don'ts checklist, which highlighted responsible online behaviour. Poor digital communication can sometimes create misunderstandings or even damage a person's image. For example, sending an informal or unclear email to a professor may leave a bad impression.

This task helped me understand how important it is to communicate professionally in academic and professional environments.

TASK 5: CYBERCRIME AWARENESS

While working on the cybercrime case study, I was surprised to learn how easily people can become victims of online fraud, especially UPI scams. Many scams work by creating panic or urgency, which leads people to make quick decisions without thinking carefully.

This made me realize that awareness is very important in today's digital world. One habit I will change is being more careful while handling online payments. I will make sure to verify every request before approving it and never share sensitive information like OTP or UPI PIN.

This task increased my awareness about online threats and taught me how to stay safe while using digital platforms.

CONCLUSION

Overall, this project was a very useful learning experience. It helped me understand different aspects of digital literacy, including communication, online safety, and professional presence. I also gained practical experience by using platforms like GitHub, Canva, and Google Forms.

The project made me more confident in using digital tools and more aware of the risks involved in the online world. I believe the knowledge gained from this project will be helpful not only during my college years but also in my future career.
